

This artist seems to like use a hand drawn style most of the time and in most case's it works for her but there are instincts where she could have used photography and it would have made her work more effective. She is not a professional when it comes to photography but tries to make up for it by taking photos at unusual angles or by making the content photographed as interesting as possible. She likes to use typography in her work and adds a lot of personality to the words depending on the music used of style needed for the project. She uses san-serif fonts the majority of the time and Myriad Pro is her font of choice. She likes to use texture in her graphic images and hardly ever does flat solid colored images. Her color palette always includes a bold color and lot of black or white in the negative space. She usually uses analogous color palettes but sometimes switches to monochromatic and her favored color combinations are:

- green, yellow green and yellow,
- red, red orange and orange
- blue, green, and yellow green
- yellow, orange, and orange

She uses an asymmetrical balance in most of her pieces and her style of choice is contemporary. Over all she is a good artist but needs to work on photography and using more classic looks in some of her pieces.
